EDUCATION

University of Toronto — Toronto, ON
HBSc in Statistics, Computer Science, and Mathematics — *June 2026*

RELEVANT WORK EXPERIENCE

Department of Fisheries and Oceans — Nanaimo, BC & Remote
Data Solutions Engineer — *May 2025 - Present*

- Built and maintained production Python and R ETL pipelines across seven source datasets and 500,000 records from Oracle, Excel, and PostgreSQL, using schema validation, testing, version control, and deployment scripts to deliver reliable, analysis-ready data.
- Developed and maintained internal web applications using Django and R/Shiny, enabling scientists and analysts to query, filter, and export fisheries data.
- Configured Linux computing environments and developed reproducible execution workflows, using parallel processing, performance benchmarking, and diagnostic logging to support computationally intensive analyses.
- Automated reporting workflows and produced official maps, figures, and reports that helped scientists and regional managers interpret salmon stock trends, respond to data requests, and prepare management materials.
- Analyzed 40 years of salmon migration data to identify lower-value sampling periods, projecting a 10% reduction in survey effort without reducing predictive precision.

Ninepoint Partners LP — Toronto, ON
Software Engineering Intern — *May 2023 - August 2023*

- Built and maintained a C#/.NET Core and JavaScript web application with Umbraco CMS integration, enabling non-technical staff to update production site content without developer support.
- Built API integrations and tax-calculation tools to automate reporting inputs and support client-facing financial workflows.
- Implemented automated contact routing and reusable interface components to streamline request handling and page development.

NYU Langone Health — New York, NY
Student Research Intern — *May 2022 - June 2022*

- Developed reusable R simulation modules using Markov chains, spline curves, and synthetic variables, enabling researchers to test analysis workflows before collecting study data.

PROJECTS

Toronto Development Timeline Map [link], *April 2026*

- Built an interactive 3D MapLibre/deck.gl timeline that lets users inspect how Toronto development applications change the city model over time.
- Designed a Python geospatial pipeline to join applications with building footprints, classify status, generate as-built layers, and audit whether completed buildings correctly replace prior massing.

NHL Predictive Model [link], *June 2026*

- Built a tested Python pipeline to ingest and validate NHL data, align historical betting odds, and evaluate predictive models across chronological holdout seasons.

TECHNICAL SKILLS

- **Languages:** Python, R, SQL, HTML/CSS, JavaScripts, C#, C++, C, Java
- **Applications and Databases:** Django, R/Shiny, .NET Core, PostgreSQL, SQLite, DuckDB
- **Development and Operations:** Git, Linux, Bash, CI/CD
- **Geospatial and Reporting:** GeoPandas, ArcGIS, MapLibre GL, PowerBI
